NAME
ax25dump — dump AX.25 traffic

SYNOPSIS
ax25dump [**-s** patty.sock] **-i** ifname
ax25dump /dev/ttyXYZ [tioarg ...]
ax25dump file.cap

DESCRIPTION
ax25dump prints out the headers and bodies of packets sent or received by an AX.25 interface, a raw KISS TNC device, or a regular file containing KISS-framed AX.25 packets.

When provided with a patty.sock Unix domain socket to a pattyd(8) instance, and an ifname, **ax25dump** will dump all packets sent and received by ifname.

When provided with a KISS TNC device, /dev/ttyXYZ, with optional termios(4) settings, or with a regular file, file.cap, **ax25dump** will dump all KISS-framed packets received by that device or contained in that file.

When provided with a KISS TNC device, zero or more [tioarg ...] may be given to specify baud or flow control. Valid settings are: **1200**, **9600**, **crtscts**, **xonxoff**.
